Shopping Application(Angular with SpringBoot Web Services)

Introduction

E-Commerce application developed for performing Admin and Customer user role operations with respective user interfaces.

Modules:-

1. RESTfull web services: API's build using spring boot are used for handling all the back end operations which includes session management using encrypted JWT Tokens.
2. Front End: User interfaces designed and developed using Angular utilising web services for handling appropriate user actions.

There are two main Features available based on the user role:-

- Admin
 - Adding products
 - Updating products
 - Deleting products
 - Manage Orders
- Customer
 - Registering into System
 - Login into Website
 - Updating Address
 - Adding product to Cart
 - Updating/ Deleting the Product
 - Placing the order

Application Screenshots:-

-Customer Login Page

A screenshot of a web browser displaying the 'E-Store' login page. The browser's address bar shows 'localhost:4200/login'. The page has a dark header with the 'E-Store' logo on the left and 'Register' and 'Login' links on the right. In the center, there is a white box titled 'User Login' containing two input fields for 'Username' and 'Password', and a 'Login' button. Below this box is a dark footer with social media icons for Facebook, Twitter, Google+, Instagram, LinkedIn, and YouTube, and a copyright notice '© 2022 Copyright: Estore'.

-Customer Registration Page

A screenshot of a web browser displaying the 'E-Store' registration page. The browser's address bar shows 'localhost:4200/login'. The page has a dark header with the 'E-Store' logo on the left and 'Register' and 'Login' links on the right. In the center, there is a white box titled 'User Registration' containing four input fields for 'Full Name', 'Email', 'Username', and 'Password', and a 'Register' button. Below this box is a dark footer with social media icons for Facebook, Twitter, Google+, Instagram, LinkedIn, and YouTube, and a copyright notice '© 2022 Copyright: Estore'.

-After login Home page will show all the product details.

Development Server

- This project was generated with [Angular CLI](#) 6.0.8
- Run `ng serve` for a dev server. Navigate to `http://localhost:4200/`. The app will automatically reload if you change any of the source files.
- Run `ng build` to build the project. The build artefacts will be stored in the `dist/` directory. Use the `--prod` flag for a production build

Thank you!!!
